

JAGADISH V

DevOps Engineer — AWS — Kubernetes — CI/CD Automation

sasijagadish@gmail.com — +91 73056 40086 — [LinkedIn](#) — [GitHub](#) — [Portfolio](#)

SUMMARY

DevOps Engineer with hands-on experience in CI/CD automation, AWS infrastructure, and Kubernetes deployments. Skilled in Jenkins, Docker, Terraform, GitHub Actions, Prometheus, and Grafana. Experienced in deployment automation, infrastructure provisioning, observability, monitoring, and incident troubleshooting across cloud environments.

TECHNICAL SKILLS

Cloud	AWS EC2, EKS, S3, IAM, VPC, Lambda, CloudFormation
DevOps Tools	Jenkins, Docker, Kubernetes, Git, GitHub, GitHub Actions
Infrastructure Automation	Terraform, Ansible
Monitoring & Observability	Prometheus, Grafana, Uptime Kuma
Operating Systems	Linux, Windows
Networking	TCP/IP, DNS, DHCP
Scripting	Bash

DEVOPS PROJECTS

AWS Native CI/CD Pipeline with EKS <i>Tech Stack: AWS CodePipeline, CodeBuild, ECR, EKS, Docker, Kubernetes</i> - Built streamlined CI/CD pipeline using AWS CodePipeline and CodeBuild. - Containerized applications using Docker and deployed workloads on AWS EKS. - Configured Kubernetes manifests for scalable application deployment. - Optimized deployment workflows, reducing manual deployment effort by 70%.	GitHub
DevOps CI/CD Pipeline with Jenkins, Terraform & AWS EKS <i>Tech Stack: Terraform, Jenkins, Docker, Kubernetes, Prometheus, Grafana</i> - Provisioned AWS infrastructure using Terraform for Jenkins and Docker environments. - Streamlined Docker build and Kubernetes release workflows using Jenkins CI/CD pipelines. - Deployed applications on a 2-node Kubernetes cluster using YAML configurations. - Monitored uptime and resource metrics using Prometheus and Grafana dashboards. - Improved cloud platform reliability through observability and monitoring solutions.	GitHub
DevOps CI/CD Pipeline with Jenkins, Docker & AWS EC2 <i>Tech Stack: Jenkins, Docker, DockerHub, AWS EC2, Docker Compose, Uptime Kuma</i> - Developed CI/CD pipeline using Jenkins for continuous build and release workflows. - Deployed Dockerized applications on AWS EC2 using Docker Compose. - Implemented branch-based deployment strategy for development and production. - Integrated uptime monitoring and alert notifications using Uptime Kuma. - Troubleshoot deployment failures, Docker build issues, and webhook trigger errors.	GitHub

EXPERIENCE

Precision Infomatic — Desktop Support Engineer - Delivered Linux and Windows system support in enterprise environments. - Managed DNS, DHCP, IP addressing, and Active Directory operations. - Handled incidents and service requests using ManageEngine ServiceDesk. - Supported troubleshooting and maintenance for 100+ enterprise systems. - Performed system patching and incident resolution to maintain uptime and stability.	Nov 2024 – Oct 2025
APP Technology — Desktop Support Engineer - Resolved operating system, hardware, and network-related issues. - Performed OS installation, troubleshooting, and routine maintenance tasks.	Jan 2024 – Oct 2024

CERTIFICATIONS

AWS Certified Cloud Practitioner — Amazon Web Services	Apr 2026 – Apr 2029
Validated foundational AWS cloud knowledge including services, security, and architecture.	
DevOps Course Completion — HCL GUVI	
Completed practical training in AWS, Docker, Jenkins, Kubernetes, Terraform, and Ansible.	

EDUCATION

B.Tech in Information Technology	2020 – 2024
S.A Engineering College, Chennai	CGPA: 7.86

HANDS-ON PRACTICE

TryHackMe — 40+ Labs
Linux CLI, permissions, troubleshooting
pwn.college — 100+ Exercises
File systems, processes, shell fundamentals
